

ARLINGTON'S NEWS & NOTES

WATER FLUSH NOTICE:

THIS IS TO NOTIFY YOU THAT WE WILL BE FLUSHING THE WATER SYSTEM ON TUESDAY, WEDNESDAY AND THURSDAY APRIL 21, 22, & 23, 2020 FROM APPROXIMATELY 8:00 AM TO 4:00 PM.

The purpose of flushing is to remove iron and other deposits from inside of the water pipes. It is normal for the water to become cloudy, and/or rusty during the flushing.

THEREFORE, WE RECOMMEND YOU TO AVOID ACTIVITIES SUCH AS WASHING CLOTHES DURING THIS PERIOD.

You may want to store up a small amount of drinking water until the water clears. If you notice a change in your water quality after we flush, open up all the COLD water taps in your home and let them run until the water runs clear.

| | | |
|----------------------------|---------------|--------------|
| DATE: | PARK MANAGER: | PHONE NO: |
| APRIL 21, 22, & 23 2020 | THERESA JONES | 231-773-0843 |

SPRING INSPECTIONS:

Spring Inspections may begin the last week of April (health guidelines & weather permitting). We will be inspecting each home site throughout our community. Here are a few things we will be checking for:

- Toys, trash, misc. items left out
- Home needs washing, painting or repair
- Condition of doors, windows, decks, porches, skirting and shed
- Lawn needs to be raked, mowed, watered & is neat in appearance

Be sure to have your home and yard in excellent shape!

*****IF YOU HAD A HARDSHIP RELATED TO THE COVID-19 PANDEMIC, PLEASE CONTACT US REGARDING YOUR INDIVIDUAL SITUATION. WE WILL WORK WITH YOU DURING THIS DIFFICULT TIME.**

AUTOMATIC WITHDRAWAL:

This is just to remind everyone that we can set up automatic withdrawals from your checking/savings account to pay your monthly lot rent without any worries. We are able to extend that same offer for your home payments as well. In short, you will be able to have all of your monthly payments deducted straight from your checking or savings and paid straight to us with no late fees or worries! Stop by the office and grab a sign up form if you're interested.

SPEEDING:

Just a reminder that residents are responsible for their guests and that the posted **speed limit is 15 mph**. Please abide by it and all the posted stop signs at all times while in our communities. We have children playing and adults walking, they should not have to worry about speeding vehicles and people running stop signs.

NEW RESIDENTS:

Gary & Amanda Armstrong to 3757 American.

Cortney Toth with child Jaelynn to 3889 Malibu.

Jasenia Andrade & Billie Welch to 3716 Liberty.

Marilyn Scraver to 2546 Spring Cove.

Kaley Billman & Joshua Short with children Lucas & Ivan to 3715 Liberty.

GET WELL:

Ken Gawronski

Betty McKinney

Kelly Vanoordt

Matt Nichols

Peggy Vaandering

SYMPATHIES:

Our hearts go out to Monya Graff & the family & friends on the recent loss of Miss Barbara Dill.

To Mary Beld and family on the loss of her husband Thomas.

THE OLD
BOX TOPS CLIPS

THE NEW
BOX TOPS LABELS

BOX TOPS:

For over 20 years, Box Tops for Education has given families an easy way to earn cash for their school, with products they already buy.

Now you can simply scan your store receipt with the Box Tops mobile app to identify participating products and instantly add cash to your school's earnings online.

No more clipping. No more sending Box Tops to school. All you need is your phone. Download the ALL-NEW Box Tops app, shop as you normally would, then simply scan your store receipts to find participating products. The app will automatically credit your school's Box Tops earnings online.

Twice a year, your school will receive a check and can use that cash to buy whatever it needs!

Please go to btfe.com or boxtops4education.com for more info.

ATTENTION EAST COMMUNITY RESIDENTS AND GUESTS:

Street parking in the East Community is prohibited at all times. Each homesite has ample parking on the off street parking pad for 2 vehicles. If you have more vehicles than parking space, you must use the visitor parking areas located throughout the east community. Parking on the grass in any of our communities is also not permitted. We will tag any vehicle parked in the street or on the grass ONE TIME, if the problem continues we will contact ASAP towing to remove the vehicle.

Consumer Confidence Report 2019

Is my water safe?

We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Where does my water come from?

Your water comes from 8 groundwater wells, each over 65 feet deep. The wells are spread throughout the park and interconnected via main water lines.

Source water assessment and its availability

The State performed an assessment of our source water in 2003 to determine the susceptibility or the relative potential of contamination. The susceptibility rating is on a seven-tiered scale from "very-low" to "very-high" based primarily on geologic sensitivity, water chemistry and contaminant sources. The susceptibility of our source is MODERATE.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity: microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses; organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

How can I get involved?

For more information about your water, or the contents of this report, contact Dave Potter at the office or by calling (231) 773-0843. For more information about safe drinking water, visit the U.S. Environmental Protection Agency at www.epa.gov/safewater/.

Water Conservation Tips

Did you know that the average U.S. household uses approximately 400 gallons of water per day or 100 gallons per person per day? Luckily, there are many low-cost and no-cost ways to conserve water. Small changes can make a big difference - try one today and soon it will become second nature.

- Take short showers - a 5 minute shower uses 4 to 5 gallons of water compared to up to 50 gallons for a bath.
- Shut off water while brushing your teeth, washing your hair and shaving and save up to 500 gallons a month.

- Use a water-efficient showerhead. They're inexpensive, easy to install, and can save you up to 750 gallons a month.
- Run your clothes washer and dishwasher only when they are full. You can save up to 1,000 gallons a month.
- Water plants only when necessary.
- Fix leaky toilets and faucets. Faucet washers are inexpensive and take only a few minutes to replace. To check your toilet for a leak, place a few drops of food coloring in the tank and wait. If it seeps into the toilet bowl without flushing, you have a leak. Fixing it or replacing it with a new, more efficient model can save up to 1,000 gallons a month.
- Adjust sprinklers so only your lawn is watered. Apply water only as fast as the soil can absorb it and during the cooler parts of the day to reduce evaporation.
- Teach your kids about water conservation to ensure a future generation that uses water wisely. Make it a family effort to reduce next month's water bill!
- Visit www.epa.gov/watersense for more information.

Cross Connection Control Survey

The purpose of this survey is to determine whether a cross-connection may exist at your home or business. A cross connection is an unprotected or improper connection to a public water distribution system that may cause contamination or pollution to enter the system. We are responsible for enforcing cross-connection control regulations and insuring that no contaminants can, under any flow conditions, enter the distribution system. If you have any of the devices listed below please contact us so that we can discuss the issue, and if needed, survey your connection and assist you in isolating it if that is necessary.

- Boiler/ Radiant heater (water heaters not included)
- Underground lawn sprinkler system
- Pool or hot tub (whirlpool tubs not included)
- Additional source(s) of water on the property
- Decorative pond
- Watering trough

Source Water Protection Tips

Protection of drinking water is everyone's responsibility. You can help protect your community's drinking water source in several ways:

- Eliminate excess use of lawn and garden fertilizers and pesticides - they contain hazardous chemicals that can reach your drinking water source.
- Pick up after your pets.
- If you have your own septic system, properly maintain your system to reduce leaching to water sources or consider connecting to a public water system.
- Dispose of chemicals properly; take used motor oil to a recycling center.
- Volunteer in your community. Find a watershed or wellhead protection organization in your community and volunteer to help. If there are no active groups, consider starting one. Use EPA's Adopt Your Watershed to locate groups in your community, or visit the Watershed Information Network's How to Start a Watershed Team.
- Organize a storm drain stenciling project with your local government or water supplier. Stencil a message next to the street drain reminding people "Dump No Waste - Drains to River" or "Protect Your Water." Produce and distribute a flyer for households to remind residents that storm drains dump directly into your local water body.

Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Arlington Woods is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Water Quality Data Table

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

| Contaminants | MCLG or MRDLG | MCL, TT, or MRDL | Detect In Your Water | Range | | Sample Date | Violation | Typical Source |
|--|---------------|------------------|----------------------|-------------|------------------------|-------------|--|---|
| | | | | Low | High | | | |
| Inorganic Contaminants | | | | | | | | |
| Antimony (ppb) | 6 | 6 | NA | NA | NA | 2019 | No | |
| Barium (ppm) | 2 | 2 | .019 | .016 | .031 | 2019 | No | Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits |
| Nitrate [measured as Nitrogen] (ppm) | 10 | 10 | .76 | .29 | .76 | 2019 | No | Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits |
| Sodium (optional) (ppm) | NA | | 15 | 14 | 15 | 2019 | No | Erosion of natural deposits; Leaching |
| Contaminants | MCLG | AL | Your Water | Sample Date | # Samples Exceeding AL | Exceeds AL | Typical Source | |
| Inorganic Contaminants | | | | | | | | |
| Copper - action level at consumer taps (ppm) | 1.3 | 1.3 | .45 | 2018 | 0 | No | Corrosion of household plumbing systems; Erosion of natural deposits | |
| Inorganic Contaminants | | | | | | | | |
| Lead - action level at consumer taps (ppb) | 0 | 15 | 0 | 2018 | 0 | No | Corrosion of household plumbing systems; Erosion of natural deposits | |

Undetected Contaminants

The following contaminants were monitored for, but not detected, in your water.

| Contaminants | MCLG or MRDLG | MCL, TT, or MRDL | Your Water | Violation | Typical Source |
|--------------------------------------|---------------|------------------|------------|-----------|---|
| Nitrite [measured as Nitrogen] (ppm) | 1 | 1 | ND | No | Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits |

Additional Monitoring

As part of an on-going evaluation program the EPA has required us to monitor some additional contaminants/chemicals. Information collected through the monitoring of these contaminants/chemicals will help to ensure that future decisions on drinking water standards are based on sound science.

| Name | Reported Level | Range | |
|---|----------------|-------|------|
| | | Low | High |
| perfluorooctanesulfonic acid (PFOS) (ppb) | .003 | .002 | .005 |
| perfluorooctanoic acid (PFOA) (ppb) | .005 | | .007 |

| Unit Descriptions | |
|-------------------|--|
| Term | Definition |
| ppm | ppm: parts per million, or milligrams per liter (mg/L) |
| ppb | ppb: parts per billion, or micrograms per liter (g/L) |
| NA | NA: not applicable |
| ND | ND: Not detected |
| NR | NR: Monitoring not required, but recommended. |

| Important Drinking Water Definitions | |
|--------------------------------------|---|
| Term | Definition |
| MCLG | MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety. |
| MCL | MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. |
| TT | TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water. |
| AL | AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow. |
| Variances and Exemptions | Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions. |
| MRDLG | MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants. |
| MRDL | MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants. |
| MNR | MNR: Monitored Not Regulated |
| MPL | MPL: State Assigned Maximum Permissible Level |
